Background

Over the past decade, the cell and gene therapy industry has witnessed milestone breakthroughs, with successive approvals of **CAR-T, TIL, TCR-T, gene therapy, mRNA, and gene editing therapies**. Recently, in vivo CAR-T has garnered significant attention, prompting increased investments from international giants such as AstraZeneca, AbbVie, and Gilead. These innovations have not only redefined treatment paradigms for diseases but also brought unprecedented hope to millions of patients and their families worldwide who once faced untreatable conditions.

The CGCS 2026 - 7th International Cell & Gene Therapy China Summit & Exhibition, hosted by Chujie Bio, is projected to bring together **200+ global top-tier speakers, 200+ leading exhibitors, 5,000+ industry professionals** for offline participation, and 10,000+ online global viewers, striving to inject more cooperation and opportunities into the cell and gene therapy industry.

Topics

Off-the-shelf Therapy

Off-the-shelf cell therapy from third-party donors would be expanded in high numbers prior to treatment and made quickly available to patients.

in vivo CAR-T

Unlocking potential of in vivo CAR-T with Parallel Advancements in LNP and Lentiviral Delivery Platforms.

Novel Cell Therapy

A series of new ACTs based on CAR technology have been developed, including CAR-NK, CAR-macrophage, CAR-γδT, TCR-T, TIL and etc

Gene Therapy

Gene therapy using AAV as a vector has emerged as a novel therapeutic modality that has potential to lead to substantial disease.

Stem Cell & Exosome

The functions of exosomes from different types of stem cells and the potentials of exosomes, an alternative way of developing strategies to cure diseases.

Affordability of CGT

Economics surrounding cell therapy raises critical questions about accessibility and affordability.

Global Cooperation

With more and more cooperations between big pharma and biotech, next generation therapeutics thrust into the spotlight.

RNA Therapeutics

RNA therapy refers to the treatment or prevention of diseases using RNA based molecules including mRNA /ASO/siRNA and etc.

Neoantigens

Rapid progress is being made in therapies such as polypeptide cancer vaccines, mRNA cancer vaccines, and dendritic cell (DC) vaccines.

Organoid

Organoids are powerful systems to facilitate the study of individuals' disorders and personalized treatments.

## Global CGT Cooperation

- CGT Development in APAC
- Case Study form US/EU
- Status Quo of CGT
- CGT Commercialization

## in vivo CAR-T

- Latest Advances
- LNP-mRNA Platform
- Viral Vector Platform
- Manufacturing and QC

## mRNA-based Therapeutics

- Novel mRNA Delivery System
- mRNA-Based Cancer Vaccine
- Lipid Nanoparticle
- mRNA Molecule Design

## Organoids Research

- 3D Cell Culture Technology
- Applications of Organoids
- Organoids-on-a-chip
- Cancer Organoids

## Next Generation Gene Therapy

- AAV Gene Therapy
- Ocular/Rare Disease,Cancer
- Innovative Delivery System
- Oncolytic Virus

## Original Innovation in CGT

- Universal Cell Therapy
- iPSC-derived Cell Therapy
- Treatment of Solid Tumors
- CAR-T in Autoimmune Diseases
- Non-viral Vector Cell Therapy

## Gene Therapy CMC&Processing

- CMC Strategy
- Scaling AAV Production
- GMP Manufacturing

## sa RNA&Circle RNA

- Self-amplifying mRNA
- Cricle RNA Development
- mRNA Quality Control&CMC
- mRNA Cancer Vaccine

## Neoantigen Cancer Vaccine

- DNA Vaccines
- Dendritic Cell (DCs) Vaccines
- Synthetic Peptide Vaccines
- Combination Therapeutic

## iPSC-derived Cell Therapy

- iPSC Reprogramming
- Clinical Progress of iPSC
- Manufacturing of iPSCs
- Quality Control for iPSC

## Novel Cell Therapy

- CAR-NK/TCR-NK
- TIL
- TCR-T
- $\gamma\delta$ T
- Treg

## Gene Editing Therapeutics

- CRISPR/Cas9 Technology
- Novel Gene Editing Platform
- In vivo Genome Editing

## Oligonucleotide

- siRNA/ASO Development
- Novel Deliver
- New Platform and Application
- Quality Control&CMC

## Stem Cell R&D and Translation

- MSC-Based Cell Therapy
- Latest Progress
- Regenerative Medicine
- Next-Generation Stem Cell

## CGT Clinical Development

- Clinical Design
- Multi-Regional Clinical Trial
- ND and NDA Considerations
- IIT

## Cell Therapy CMC&Processing

- Quality Control & CMC
- Vector Production & Scale-up
- Bioprocessing Development
- Commercial Manufacturing

## Stem Cell & Exosomes

- Stem Cell-derived Exosome
- Beauty & Personal Care
- Anti-Aging
- Delivery System

## VIP High-Level Meeting

- 30 + High-Level Delegates
- Closed-door Meeting + Dinner

## Center Stage Show

- Product Showcase
- Case Study
- Product Lunch
- CGT Roadshow

## Satellite Meeting

- CGT / RNA / Vaccine
